CONTAINER HOMES

Collapsible Container House

The collapsible container house is the hottest sale model at the moment because of the following advantages:

1. It is all bolt connection to small parts, don't need a crane for installation and take less space in shipping the container.
2. The frame is made with galvanized steel powder coating, which makes it hard to get rusted.
3. It can be combined to make a big room.
4. It can be also stacked 2-3 levels.
5. It comes with insulation to keep it warm in winter and cold in summer.
6. The size and design can be made according to your request.

The collapsible container house can be used as an office, hotel, restaurant, toilet, garage etc.

Restaurant

Gable Roof Container House

The gable roof container house is designed from our collapsible container house, the advantages are as follows:

1. The triangle roof makes it better for snow and water to flow down, so it is quite popular in areas with heavy rain and snow.
2. It is also all bolt connection same with our collapsible container house, so the installation doesn't require a crane. Also take less space in shipping container.
3. The frame is also made with galvanized steel powder coating, which makes it hard to get rusted.
4. It comes with insulation to keep it warm in winter and cold in summer.

Trailer Container House

Some clients want the container house movable, so we can add wheels for them,

For W2300*L5940*H2810mm trailer container house, 1*20ft container can load 5 sets, 1*40HC container can load 14 sets.

Expandable Container House

The expandable container house is a good design for high labour cost area. Openable size is 5850mm*6085mm*2500mm, Closed size is 5850mm*2250mm*2500mm, so the 3 in 1 design make it 10 minutes install one 35m² house.

The advantage of our expandable container house is as follows:

1. As you know the folding design is with a thicker frame to avoid bending during folding and unfolding. We are using a thicker steel frame, the top main beam is 5mm thickness, and some supplier just use 1.5mm thickness steel.
2. We are using 75mm thickness insulation, and some supplier only use 50mm thickness insulation.
3. The space between our floor secondary beam is 380mm, this will make the floor structure strong and not shake. But for some supplier, their space between the secondary beam is 600mm.

Folding Container House

The folding container house is a good design for construction sites, because it can be folded and unfolded many times. Size W2.48M*L5.8M*H2.5M (folding size W2.48*L5.8*H0.49M, interior size W2.295*L5.6*H2.3m)

For folding container house, 1*40HC container can load 10 sets.

Metal Carport & Garage

The Metal Carport is a newly re-designed product and multi-use shelter that is wind and snow rated for maximum protection against the elements. Our carport features a galvanized steel roof with horizontal panels. The metal carport has a wind speed rating of 100 MPH and a snow/ground load rating of up to 35 PSF.

We have many sizes and design of metal carport, please contact us for more information.
